

ABSTRACT

Disclosed are a photopolymerizable composition and a recording material containing the composition. The composition comprises a polymerizable compound having an ethylenic unsaturated bond, a compound of the following general formula (1), and a radical generator that interacts with the compound of formula (1) to generate a radical. In formula (1), each of R^1 , R^2 and R^4 is an aliphatic or aromatic group; R^3 is a group shown below; R^5 is a hydrogen atom, or an aliphatic, aromatic or heterocyclic group; Each of L^1 to L^4 is a substituted or unsubstituted methine group; Each of Z^1 to Z^3 is an atomic group which forms a 5-membered nitrogen-containing hetero ring; and X is a group which forms an anion.
